

PATENTAttorney Docket No. **BOOSY-08803****AMENDMENTS TO THE CLAIMS**

1. (previously presented) An apparatus for producing at least one mosaic tile sheet, comprising:

- i) a grid comprising a plurality of slots suitable for ordering a plurality of tiles;
- ii) a screen comprising a plurality of holes corresponding to said plurality of slots of said grid, wherein said screen is made of a rigid material and is suitable for supporting said plurality of tiles;
- iii) a tank comprising an open end and an outlet, wherein when said apparatus is assembled, said screen and said grid cover said open end of said tank; and
- iv) a vacuum pump connected to said outlet of said tank, wherein said vacuum pump is suitable for applying negative pressure to said open end of said tank.

2. (canceled).

3. (previously presented) The apparatus of Claim 1, further comprising a means to plug said holes of said screen that are not covered by said slots of said grid.

4. (previously presented) The apparatus of Claim 1, wherein said vacuum pump is rotary vane vacuum pump.

5. (previously presented) The apparatus of Claim 1, wherein said negative pressure is continuous and invariable.

6. (original) The apparatus of Claim 1, wherein at least one of said plurality of slots are in a shape selected from the group consisting of a square, a rectangle, a rhombus, a trapezoid, a triangle, a pentagon, a hexagon, an octagon, a circle, an oval, a crescent, and a star.

PATENTAttorney Docket No. **BOOSY-08803**

7. (original) The apparatus of Claim 1, wherein one or both of said grid and said screen further comprise a means for aligning said screen to said tank and/or said grid to said screen.
8. (original) The apparatus of Claim 1, wherein said grid is permanently attached to said screen.
9. (original) The apparatus of Claim 1, wherein said screen is permanently attached to said tank.
10. (withdrawn - currently amended) A method for producing at least one mosaic tile sheet, comprising:
- a) providing:
 - i) a plurality of mosaic tiles, wherein said tiles comprise front surfaces and back surfaces,
 - ii) an adhesive,
 - iii) a rigid backing comprising a front side and a back side, and
 - iv) the apparatus of ~~Claim 2~~ Claim 1;
 - b) placing said plurality of mosaic tiles in said plurality of slots of said grid to produce a grid-mosaic tile assembly;
 - c) placing said grid-mosaic tile assembly over said screen, wherein one side of said screen covers said open end of said tank, and wherein the opposite side of said screen comes in contact with said front surfaces of said mosaic tiles of said grid-mosaic tile assembly;
 - d) applying negative pressure to said front surfaces of said mosaic tiles through said holes of said screen with said vacuum pump; and
 - e) applying said adhesive to a front side of said backing or to said back surfaces of said mosaic tiles, and placing said backing on said grid-mosaic tile assembly such that said back surfaces of said mosaic tiles and said front side of said backing come in contact with said adhesive to produce at least one mosaic tile sheet.

PATENTAttorney Docket No. **BOOSY-08803**

11. (withdrawn) The method of Claim 10, further comprising step f) applying downward pressure to said backing in order to uniformly distribute said adhesive on and around said mosaic tiles of said grid-mosaic tile assembly.

12. (withdrawn) The method of Claim 11, wherein said applying downward pressure does not cause said adhesive to contact said grid.

13. (withdrawn) The method of Claim 11, further comprising step g) removing said negative pressure after said adhesive has set.

14. (withdrawn) The method of Claim 13, further comprising step h) removing said mosaic tile sheet from said apparatus after said negative pressure has been neutralized.

15. (withdrawn) The method of Claim 10, wherein a design template is provided for guiding the placing of said plurality of mosaic tiles of step b.

16. (withdrawn) The method of Claim 14, further comprising step i) beveling at least one side of said mosaic tile sheet.

17-25. (canceled).

26. (previously presented) The apparatus of Claim 1, wherein said negative pressure is less than 5 torr.
